Unico Inc. Bromide Gold Mines - Hanksville - - History of the Henry Mountain Mines -

BROMIDE BASIN MINE HISTORY -

The Bromide Basin Gold Mines -
are located approx. 30 miles south of Hanksville,
Utah -
in the Henry Mountains -

The Henrys are an ecological as well as a
geological anomaly -

The Eagle City - symbolizing the dreams of 1890 -
Gold miners - sits at the base of the mountain -

[http://www.mapquest.com/maps/map.adp?
searchtype=address&formtype=address&latlongtyp
e=decimal...](http://www.mapquest.com/maps/map.adp?searchtype=address&formtype=address&latlongtype=decimal...)

Mt. Ellen is also the county highpoint of Garfield
county -
and is the King, errr, Queen of the Henry Range -
Mount Ellen, is a huge mountain ridge, a North
Ridge -
which has -

the actual high point of 11,522 feet, and, one mile
further -
north yet across a 400' drop, Ellmany miles in
length
composed of three sections: a South Ren Peak, a

conical

pyramid of 11,506', This is a very attractive peak,
one that begs to be climbed if you have the time -

Butch Cassidy and his gang of outlaws hid in this
wild,
roadless country known as Robber's Roost at the
turn of
the century - spirited with rich Utah history -
echoes of Butch Cassidy and the Sundance Kid
reverberate
through the canyons of the Dirty Devil;

rugged and desolate lands around Factory Butte are
reminiscent of the challenges met by Utah's earliest
settlers;
and the Henry Mountains, the last mountain range
to be mapped in the continental U.S, stand
relatively unknown and unexplored -
From the Henrys one can see the wide expanse of
the heart
of the Colorado Plateau:
the Abajo and La Sal Mountains, the sculpted walls
of
the Maze, the Book Cliffs, the jagged teeth of
the San Rafael Reef, Waterpocket Fold, the aspen-
dotted bench
of the Awapa Plateau, and down into Arizona
toward
the deepest canyons of the Colorado River.
Surrounded by Capitol Reef and Canyonlands
National Park,
Glen Canyon National Recreation Area, and the
San Rafael
Swell, the lands are some of the most unique in the
state of
Utah -

One of the nation's free-roaming buffalo herds
has wandered the range since 1941, when 18 head
were
transplanted from Yellowstone National Park -

At the top of the range sits 11,522-foot Mt. Ellen,
the tallest peak in Garfield County -

Sunset on Mt. Ellen and the Henry Mountains near Caineville, Utah -

The boulder-strewn summit—listed in some literature as being 11,615 feet high—sits on the north end of the desert range -

It was the lure of Gold & Silver precious metals that brought the largest influx of settlers into the area -

Glen Canyon experienced a number of Gold rushes beginning in the early 1890s which had an effect on the Henrys -

Lumber for the mining camps and for the Stanton Dredge was cut at many places in the mountains, and roads to reach the stands of timber were built up Bull Creek, where a sawmill was also built -

Naturally, some of this activity led to other activities in the mountains -

Located in Bromide Basin at the head of Crescent Creek - in the Henry Mts. John Angrove discovered Gold there - and was killed for it -

Gold & Silver - located in 1889 by Jack Sumner - and Jack Butler, called Bromide Gold Mine -

In 1890 Jack Sumner - who had been with Powell in 1869 - located the Bromide Gold Mine near the summit of Mount Ellen -

The Gold Mines - seemed good, and by 1893 more than 100 men were reported to be working in the area -

A town called Eagle City was established - at Crescent Creek, at the foot of the mountains -

Eagle City - is at the fork of the canyon - two miles below Bromide Basin -

with homes - a store, doctor's office - a hotel, two saloons, a dance hall - three stores, and a post office -

The Gold Mines at the Eagle City - they are mines hand dug - with the sweat and blood of manual labor - each cut into the stone - and each shaft - meticulously worked with a pride - that is not seen now a days -

**These mines are the epitome of the Great American -
Liberty and Freedom Dreams -
These miners slaved away in these mines -
with the hope -
that they would "strike it rich" -**

The Denver and Rio Grande Western Railway made
-
preliminary surveys for a branch line from
Green River, Utah, to Eagle City -

Other mines were begun and a number
of prospects were developed by Edwin T. Wolverton
-
beginning around the turn of the century -
and build a stamping mill there -

Long riders from the Wild Bunch were said -
to have come through -

Water seeped into shafts as they went deeper -
the miners had no electricity -
and no high speed jet pumps -
it was economically unfesible -
to keep the hand rope chain -
bucket draining -

Bromide Gold stamp mill -
burned in 1911 -

WWI was the end of Eagle City -
All Gold Miners with the American pride -
volunteered for the Army -
Only Frank Lawler remained another 60 years at the
city -
Lawler believed the Lost Josephine Mine to be -
in the Henrys - waited for the miners to come back -
but they got lost in the WWI -

Some mining activity as late as 1988 -
A few remnants of buildings -
couple beautiful stone houses -

**The Eagle town - located in the Henry Mts., very
remote -
very beautiful scenery -**

**A very special Golden & Bald Eagle place -
with Good American history in
"Liberty Dreams Never Die"
the history repeat itself -**

**Bromide Basin is the location for
Kimble and Turner Gold Mines -
Crescent Creek Gold Mines -
Henrietta Gold Mine -
and the Bromide Gold Mines -
The main metal produced was Gold & Silver and
Copper -
was present in most of the ores mined -**

**The Bromide Gold Mines -
is an underground mines with northeasterly**

striking veins
with breccia pipes (structural intersections) -
containing ore as high as 26 opt Au -
and the overall average of the vein material is 7
opt Au.

This structure can be traced on the surface -
for over 1,800 feet averaging 2 feet wide -
with several gold enriched outcroppings.

The Crescent Creek Gold Mines -
is adjacent to the Bromide Gold Mines
properties -
and contains mostly oxide ore -
averaging Gold over 0.25 opt Au -
with Copper Cu -

The workings are all underground -
and very close to the surface -
situated on a northeasterly striking vein -
averaging 4 feet wide which has been traced -
for over 400 feet -

The Kimble and Turner Gold Mines -
consists of some underground workings along -
a northeasterly striking vein -
with associated breccia pipes -

The vein is 4 feet wide and contains Gold ore -
averaging Gold 2.0 opt Au with Copper Cu ore -

The vein is mostly oxidized with some remnant
pyrite -
and chalcopyrite -

The vein dips west back into the mountain -
and extends northeast towards -
the Bromide Gold Mines -

The Henrietta Gold Mine -
is a mineralized exposure on the surface
containing -
mineralization that has assayed as high as Gold
ore 3 ounces
Au per ton Gold -
The overall average of this ore will be lower -
however tonnage will be high -

Unico produced a 2,500 ton bulk sample from
the Gold mines -
in 2001 which is being shipped to -
the Deer Trail Mill -
for processing and tests -

The Gold ores produce "Free Gold" and a "high-
grade Gold" - concentrate -

History of the Henry Mountain Mines -
Partly Excerpted from the USGS Professional 111 -

"Ore Deposits of Utah"
B. S. Butler, 1917 -

The first lode deposit to be discovered in the
Henry Mountains that proved of any consequence -
was the Bromide Gold vein, which is said to have

been
discovered in 1889 or 1890 by the partners,
J. C. Sumner and Jack Butler.
Active development of the Bromide Gold Mine -
was carried on in 1891, and a stamp mill -
was built and operated intermittently till -
the following summer -

The Gold Mine remained idle till 1902 -
when it was reopened and made production -

The finding of the Bromide Gold vein -
stimulated prospecting in the region -
and several veins were discovered -
and prospected to some extent -

Next to the Bromide Gold Mine -
the most extensive development has been -
the Oro prospect (Kimble and Turner) -

A one-stamp mill was erected and some ore treated
-
(average grade of the Gold ore was reported
to be 2 opt Au).

The Bromide Gold Mine -
produced approximately 7,500 ounces of Gold -
in 1892 mining season -

The Bromide Gold Mine -
has been opened by a tunnel about 380 feet long -
connecting with a shaft at a depth -
of about 125 feet -

A winze has been sunk 60 feet -
below the tunnel level -
The vein has been developed on the tunnel level -
for perhaps 200 feet -
and has been stoped on different levels -
from the tunnel level -
to the surface -

It is reported that ore is present -
in the bottom of the winze -
but at the time of the visit -
this was filled with water -
and could not be examined.

A cross cut tunnel (El Padre) -
started from Crescent Creek -
near the mill -
will, if extended, intersect the downward extension -
of the plane of the vein about 400 feet below -
the present tunnel -

The face of the present crosscut tunnel -
was about 900 feet from this -
objective point in 1913 -

**Unico's Bromide Mine Work Summary: 2003
Season -**

20 February 2004 -

Unico Incorporated -
(Arizona), announced a summary of activities for
2003 at -
The Bromide Basin Gold Mines - Hanksville, Utah:

Snow removal was the first order of business as the
work season
commenced in mid May at the Bromide Mine -
in the Henry Mountains of Utah.
Access roads were cleared, repaired and improved.
Rock fall from the spring thaw was removed from
the entrance
of the El Padre Tunnel -
and access into the Kimble and Turner Gold Mines -
was re-established by removing snow from the
portal.

Next, new discharge water pipes were installed at -
The Bromide Gold Mines -
and the de-watering of the tunnels began -

Two problems delayed progress at
The Bromide Gold Mines -
this season - Unico's mine rescue coverage -
required by MSHA and previously secured for years
-
by the mining company covering our operations -
was unexpectedly terminated due to new company
policies -

Initially, the Unico had difficulty obtaining new mine
rescue coverage due to the remote location of
the Bromide mines -

All work at the Bromide - had to be stopped until
coverage
was eventually secured and all MSHA concerns
were satisfied -

Two wild fires in the Henry Mountains threatened -
the general Bromide Basin area -
and prevented any major mining activity for a period
of time -

The mine water from the Bromide Mines -
was dedicated to the fire fighting effort -
After the fires were contained and Unico Inc. was
given
the 'all clear' work resumed at the Bromide Mines -
until the fall snows once again closed access -
to the Gold mines -

PROGRESS REPORTS -**BROMIDE Gold MINES:**

Continuing exploration work this season in
the Bromide Mines re-confirmed the existence of a
high-grade Gold structure -
Four hundred pounds were extracted by crude
methods -
from the high-grade area.

During this work visible wire Gold was observed in the rock -
that could literally be picked from the walls -
of the structure.

Unico recovered 2.9 ounces of course Gold -
from this sample by hand sorting and sluicing -
Further grinding of this material at -
The Deer Trailing milling facility -
will liberate the finer particles (-10m) of Gold.

The work at the tunnel included laying track -
to connect with track already in the tunnel -
compressed air service -
and establishing electricity -
with the addition -
of a diesel-powered generator.

Shrink, cut and fill stoping methods -
will be utilized to extract the Gold rich ore -
from the Bromide vein via the El Padre tunnel.

In addition, the mineralized rock from -
the Kimble and Turner Gold Mines -
will be extracted by mechanical means -
and shipped for processing.

Previous soil survey work revealed many
prospective areas for the discovery of more Gold -
occurrences in the basin, but most importantly -
re-confirmed the strike of
the Bromide Gold Mines -
Crescent Creek Gold Mine -
Kimble and Turner Gold Mines -
mineralized structures -

Past drilling clearly established that the Gold -
mineralization in Bromide Basin Gold Mines -
is structurally controlled and that no disseminated -
mineralization in the country rock was encountered -

EL PADRE:

The El Padre tunnel will serve as access to -
the Bromide vein (400 feet above the tunnel)
and possibly others, and provide drainage -
for the Bromide Gold mine.

Track for the El Padre tunnel was obtained -
this season and transported to the mine site.

The high wall above the El Padre Mine tunnel -
was secured and timbering of the portal -
was completed -

Preliminary ground leveling work at El Padre -
was begun in order to properly lay the track -
from the surface into the tunnel -

A mine locomotive -
charger and other mining equipment -
were also delivered to the El Padre -

All infrastructure for completing the Mine tunnel -

is in place -

KIMBLE and TURNER Gold Mines:

Static screens were installed at Kimble -
and Turner and previously excavated Gold rich -
mineralized rock was screened -

The Gold recovered from the fines was tested -
by simple gravity methods confirming a very high -
recovery rate of course Gold -

It is believed that the finer mesh Gold (-10m) -
could be liberated by further pulverizing the ore -
and additional grinding would liberate -
even finer Gold -

Limited amounts of Kimble and Turner Mines
material -
were transported to a staging station -
where it could be loaded for delivery to -
the Deer Trail mill in Marysvale, Utah -

2004 OUTLOOK:

Despite some frustrations in the 2003 season -
the company was able to improve the infrastructure
-

at the Bromide Gold Mines -
and transport about 400 tons of Bromide material -
to the Deer Trail mill;
235 tons coming from Hanksville, Utah -
and 160 tons from Fredonia, Ariz. -
formerly a processing site -
for Bromide Gold ore -

Unico expects to resume the mining -
and other operations at -
the Bromide Gold mines -
as early as March/April 2004.

Initially, preparations will be made to upgrade the
infrastructure in and around the mine areas -
These improvements will provide more effective
access -
to the general working area of the mines -
and lay the groundwork for continuous operations -
throughout the season -

In the upcoming 2004 season -
the Unico company is looking to increase -
the production levels at the Bromide Basin Gold
Mines -
To that end primary planning will include -
the continuation and completion of -
the El Padre Tunnel Mine -
and the development of production headings -
within the Bromide veins -

For more information about the Bromide Basin Gold
Mines -
and other company projects contact -
Ray Brown at 530-873-4394
and visit Unico's website at -

<http://www.unicomining.com>

Unico Inc., a publicly traded Arizona Corporation -
is listed on the OTC Bulletin Board, stock symbol
UCOI -

This natural resource company is focused on
the production of Gold and other precious -
and valuable metals and concentrates from its -
Deer Trail Gold Mines -
Silver Bell Mine -
and the Bromide Basin Gold Mines -
Its mill facility is located at -
the Deer Trail Gold Mine -
in Marysvale, Utah -

Management believes these mines -
have the potential to become profitable -
and develop into a world-class ore body -

The news release may contain forward-looking
statements --
-- with respect to these factors which could
materially
affect the company and its operations are included
on
certain forms the company files with the Securities
and Exchange Commission.

Behre Dolbear -

Founded in 1911 by Samuel Dolbear -

Behre Dolbear -

is one of the oldest, continually operating minerals industry

consulting firms in the world -

Since its founding, the company has spanned the industry

from the primitive pick and shovel days of mining to the computer age of geostatistics.

The company specializes in performing studies and consulting

for a wide range of businesses with interests in the minerals industry, including:

- * major and junior mining companies
- * banks and other lenders
- * venture capital syndications and private individuals
- * government agencies
- * native or First Nations peoples, tribes, or bands.
- * mineral and other landholding companies

From offices around the world, the firm has performed

assignments across the whole spectrum of commodities

including base and precious metals, coal and lignite, ferrous metals, uranium, industrial minerals and gemstones -

Eagle City, Utah

From Wikipedia, the free encyclopedia

Eagle City is a ghost town located in Garfield County, Utah, United States. Nestled in Bromide Basin high in the remote Henry Mountains of southern Utah, it was a gold mining camp. Eagle City was settled about 1890, but was almost abandoned by the start of World War I. A single resident remained until the 1970s.

History

In 1889 a pair of prospectors discovered gold deposits in the Bromide Basin area, setting off a small gold rush. Owners of the Bromide and Oro mines built mills on Crescent Creek, where a small town grew up. Eagle City soon had a store, hotel, doctor's office, and saloon. As many as 100 people lived here at one point. Eagle City had a rough reputation, and members of Butch Cassidy's Wild Bunch were known to visit.

As the mine shafts reached the 300-foot (91 m) depth, the mines began to fill with water. A 3,000-foot (910 m) drain tunnel was planned, but never completed due to lack of capital. In 1911 the Bromide Mill burned down. Soon World War I took most of the remaining young men. Only Frank Lawler stayed behind at Eagle City. He lived there alone for the next 60 years, searching for the legendary Lost Josephine Mine.
